

4. The file is now opened in the tool.

5. Browse through the root folder tree as seen above until you reach **ev6_tex_high_00.pssg**

6. click on it to highlight it.

7. Next go to the menu and click **Item, Extract To**.

8. Extract/save the highlighted **ev6_tex_high_00.pssg** somewhere on your pc.

9. Now close the tool without saving the **ev6.nefs**.

ALWAYS KEEP .NEFS ORIGINAL.

If you do edit and save ev6.nefs the career progress will not be saved in the game and you cannot upload times. This goes for all .nefs.

10. Now you can edit the extracted **ev6_tex_high_00.pssg** with a custom livery you made. Always make use of the latest PSSG Tool.

11. Make sure you save the **.dds** files with the correct **BCn settings**.

12. Make sure you save the edited **.pssg** files, **Save As Pssg (not compressed)**

13. All **tools, car folder names** and **BCn settings** can be found on my website, see link mentioned on page 1.

14. On my website you can also find a manual on how to install custom made liveries so it will not impact career progress and online functionality, see link on page 1.

15. Enjoy modifying your rally game 😊.

Visit www.rallygamer.com for more liveries, mods and tools.
